

## Fibre Rinse

### Fibre rinsing for the fibre artist\*

1. Add 1 oz. of Unicorn Fibre Rinse to 2 gallons of lukewarm water.
2. Swirl water to incorporate Fibre Rinse into the water.
3. Fully submerge garment bag containing fibre into the warm rinse bath.
4. Let soak for 5 minutes.
5. Very *gently* lift garment bag from the bath and *gently* squeeze excess dirty water from garment bag and set aside.
6. Drain dirty water and repeat steps 1-5 one more time.

#### Note

*\*To maximize the bonding of dyes to fibre, rinse as above without adding Unicorn Fibre Rinse. Finish up the dyeing process with a final rinse using Unicorn Fibre Rinse.*

### Fibre mill start-up guidelines for Fibre Rinse\*

We recommend the use of Unicorn Fibre Rinse in the final rinse,\* this product will help strengthen the fibre, ease the final processing steps and maximize ease of handling. Depending on fibre type, this product should be added to the bowl at approximately 2% of the fibre dry weight. For example, to rinse 100 lbs. (45.4kg) of fibre use 2 lbs. or 32 fluid oz. (.9kg or .95L) of Unicorn Fibre Rinse.

#### Notes

*\*To maximize the bonding of dyes to fibre we suggest conditioning with Unicorn Fibre Rinse after the dyeing process not before.*

*Each fibre mill is expected to be slightly different and the above recommendations should be used as a starting point.*

**Unicorn Fibre Rinse is a biodegradable, earth friendly professional grade product that contains no phosphates, enzymes or fillers.**
