

I wasn't sure how to introduce this topic but suffice to say that annual doctor's appointments as you get older are important. Unlike a cut finger or a sprained ankle some maladies don't show up until it's too late even with medicine's advanced techniques and miracle cures. So, this leads us into the story of . . .

## **THE PHYSICAL**

An elderly married couple scheduled their annual medical examination for the same day so they could travel together.

After examining the man, the doctor says to him "You appear to be in good health. Do you have any medical concerns that you would like to discuss with me?"

"In fact, I do," he says. "After I have sex with my wife for the first time, I am usually hot and sweaty. And then, after I have sex with my wife the second time, I'm usually cold and chilly."

"That's very interesting," replied the doctor. "Let me do some research and get back to you."

After examining the elderly woman, the doctor says "Everything appears to be fine.

Do you have any medical concerns that you would like to discuss with me?”

The lady replied that she had no questions or concerns.

The doctor then says, “Your husband had an unusual concern. He claims that he is usually hot and sweaty after having sex the first time with you and then cold and chilly after the second time. Do you happen to know why?”

“Oh, that old buzzard!” she replies. “That’s because the first time is usually in July and the second time is usually in December!!!”
